

# **NX Gemini** Introducing the NEXTracker Two-in-Portrait Smart Solar Tracker

The NX Gemini<sup>™</sup> two-in-portrait (2P) solar tracker optimizes lifetime value and performance, helping project developers and asset owners get the most from their power plant. Ideally suited for sites with challenging soils, high winds, and irregular boundaries, the ruggedized 2P tracker features a patent-pending distributed drive system for maximum stability in extreme weather, eliminating the need for dampers and producing virtually zero energy losses associated with stowing.

#### Capitalize with Highest Power Density Solar Tracker

NX Gemini's flexible 2P module configuration allows for the maximum number of modules per foundation, requiring only 60 meters and seven foundation posts to provide support for up to 120 modules on four 1500-volt strings. With the lowest number of foundations per megawatts on the solar tracker market today, NX Gemini helps reduce tracker installation costs on difficult sites.

## Pair with TrueCapture and Bifacial for Maximum Performance

The 2P tracker can be equipped with either monofacial or bifacial PV modules and integrated with the entire NEXTracker software ecosystem, including the TrueCapture<sup>™</sup> advanced smart control and energy yield enhancement platform. Incorporated into the NX Gemini design is the field-proven innovations found in NX Horizon<sup>™</sup>, such as independent-row architecture, intelligent control systems and wireless communications.

## FEATURES AND BENEFITS

- Industry-leading 2P design with 7 foundations points per 120 module row
- Ideal for challenging soils
- Bifacial-optimized for maximum performance
- Patent-pending distributed drive system for maximum stability in high winds
- TrueCapture ready, gain up to
  6% more energy
- Special rotation feature for high velocity module installation

If The NEXTracker team has always collaborated with us during their product development process, resulting in trackers that are faster to build, compatible for more sites and easier to maintain. NX Gemini is a strong tracker option for sites with challenging topography and geotechnical conditions.

George Hershman, President of Swinerton Renewable Energy

### **GENERAL AND MECHANICAL**

| Tracking type                  | Horizontal single-axis, independent row                                  | Tracking range                 | ±50°                                                                                       |
|--------------------------------|--------------------------------------------------------------------------|--------------------------------|--------------------------------------------------------------------------------------------|
| String voltage                 | 1,500 V <sub>DC</sub>                                                    | of motion                      |                                                                                            |
